

ENDOSTREAM

Developer of aneurysm devices, utilizing self-conforming scaffolds that adapt to an aneurysm's unique shape and provide maximal neck metal coverage

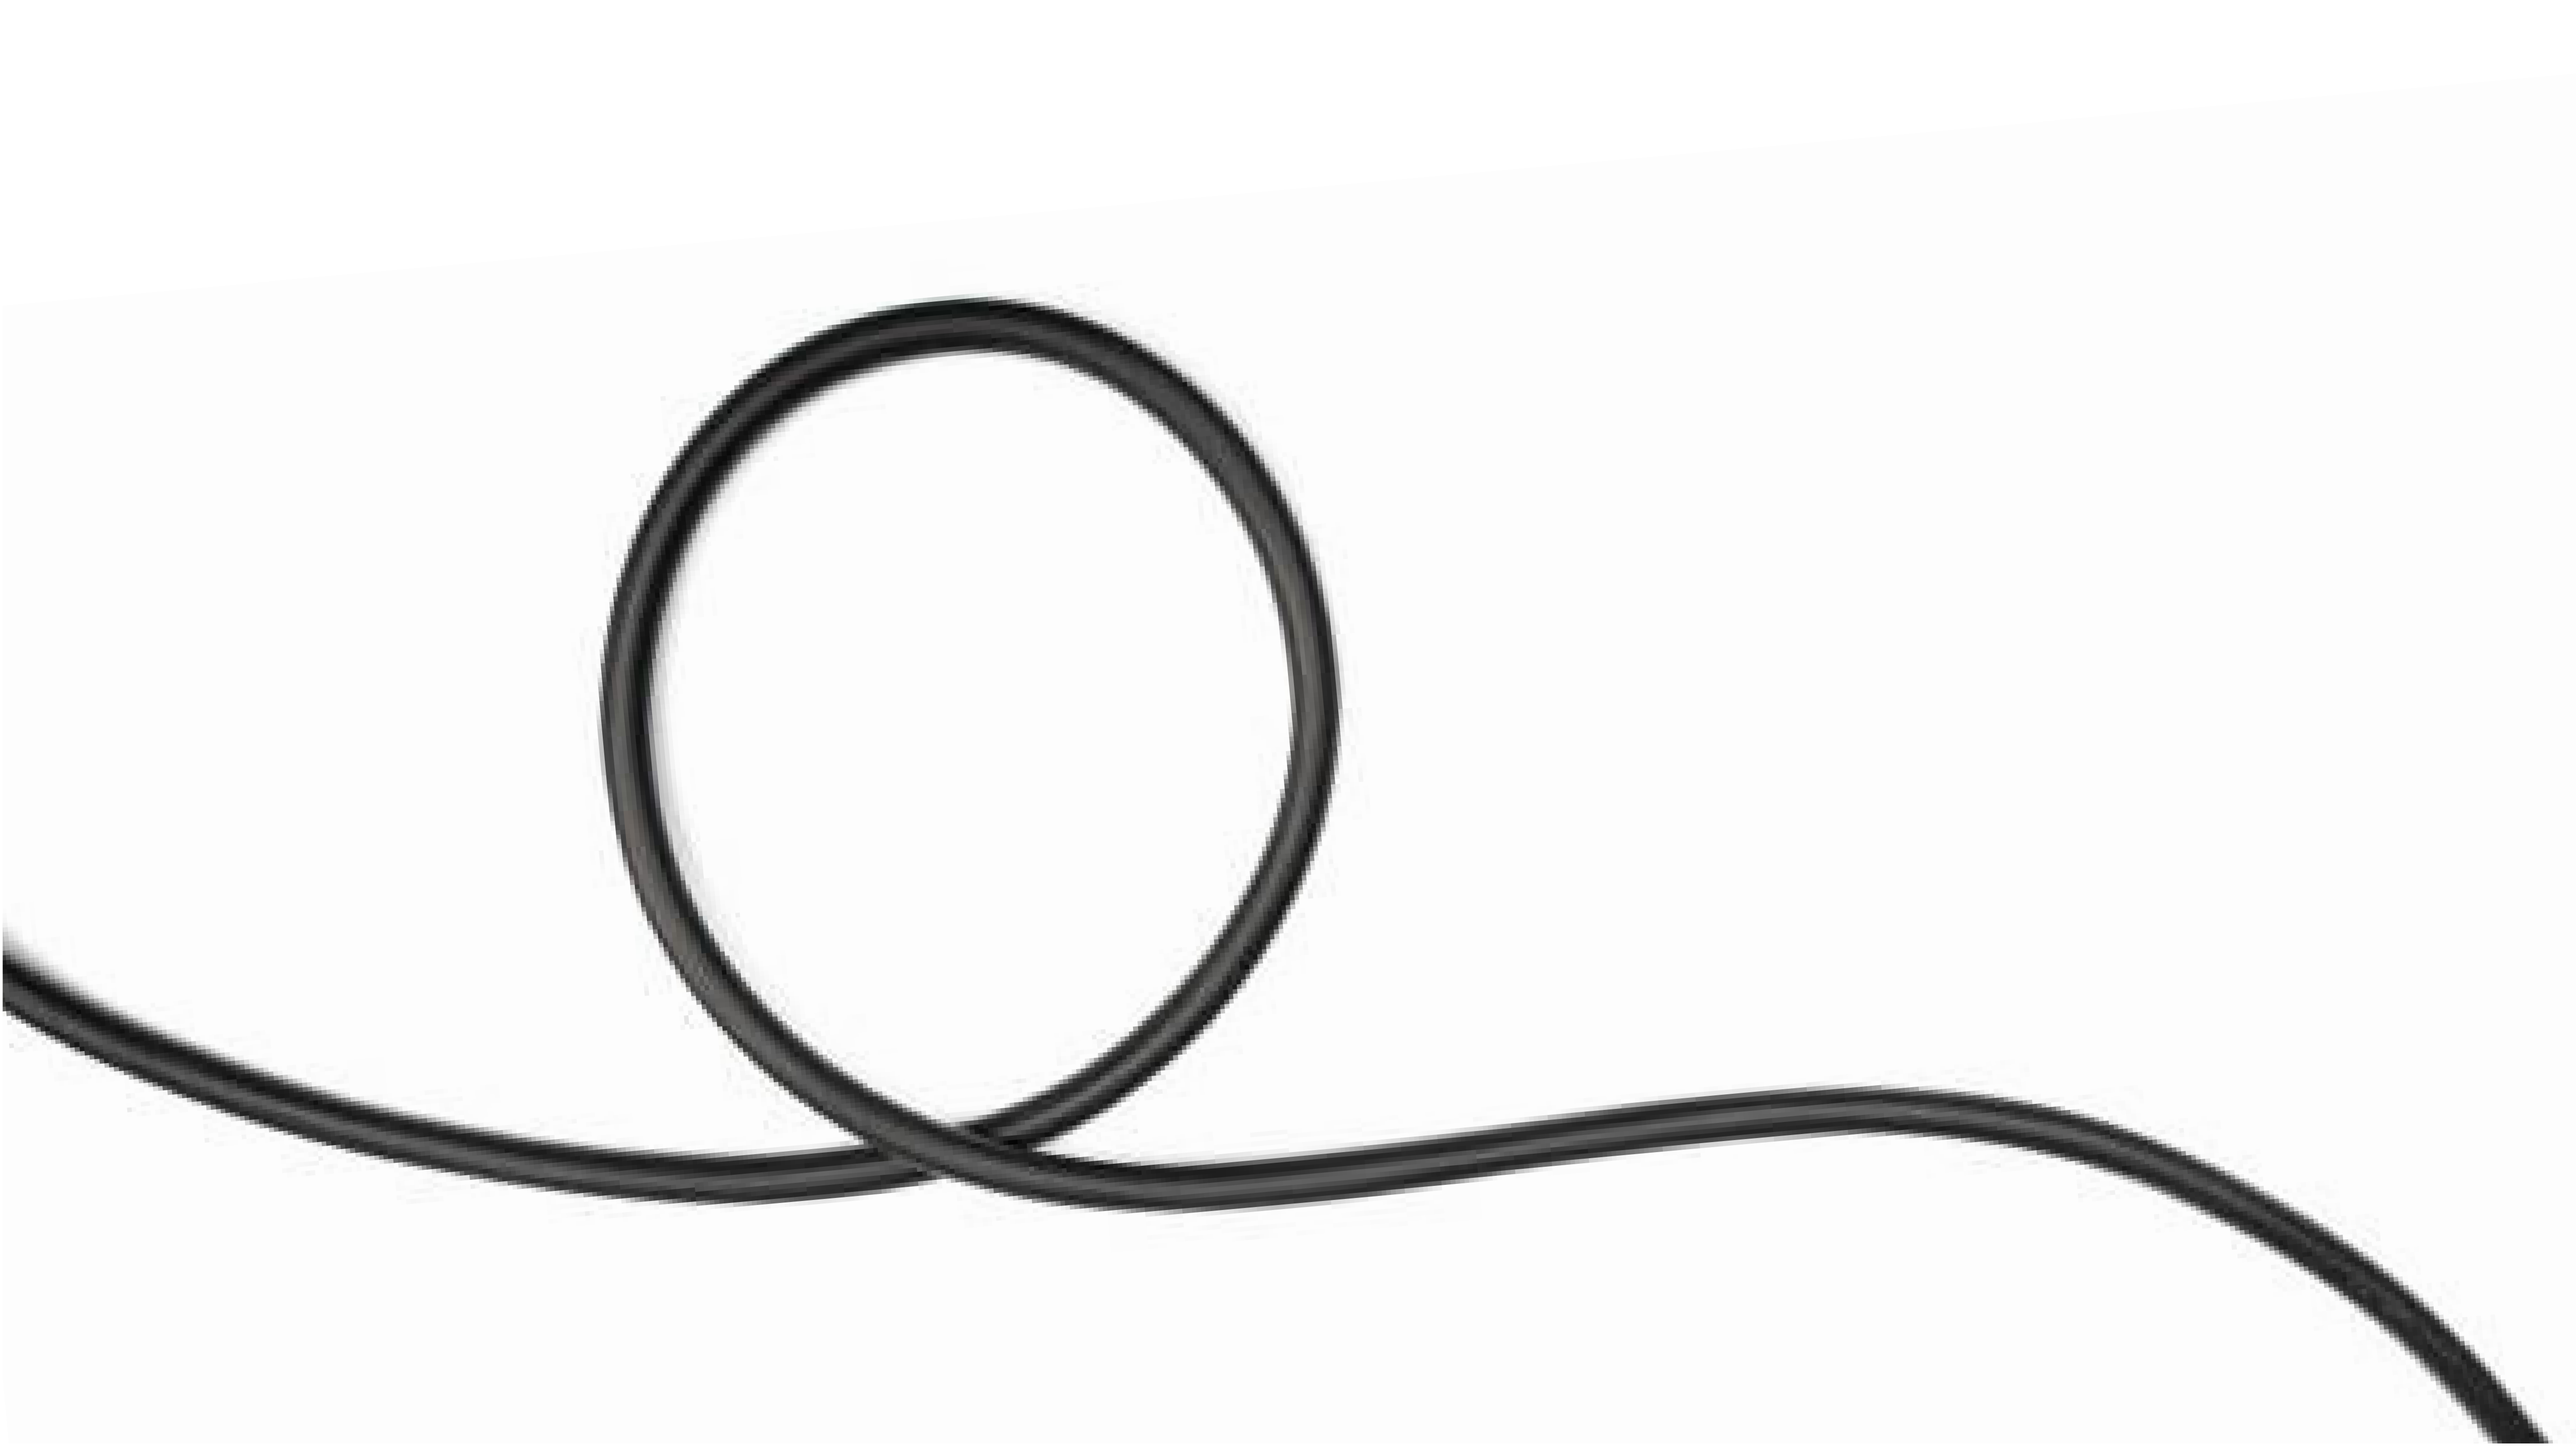

Deliverables: Communication's strategy, investor deck, branding & website

Our Features

Self-conforming. Better coverage. Superior results

Ultra Thin

Using a standard 0.017" coiling micro-catheter to reach the smallest vessels, a pre-shaped straight thread is pushed through, and receives its pre-shaped structure upon deployment at the aneurysm site

High Visibility

The pre-shaped dynamic thread is fully radio opaque, enabling controlled and confident deployment under full visualization to achieve optimal positioning in the aneurysm

Adaptive Structure

The dynamic thread is deployed into a tight structure that conforms itself to the unique shape of the treated aneurysm, achieving maximal metal neck coverage at the endothelial plane

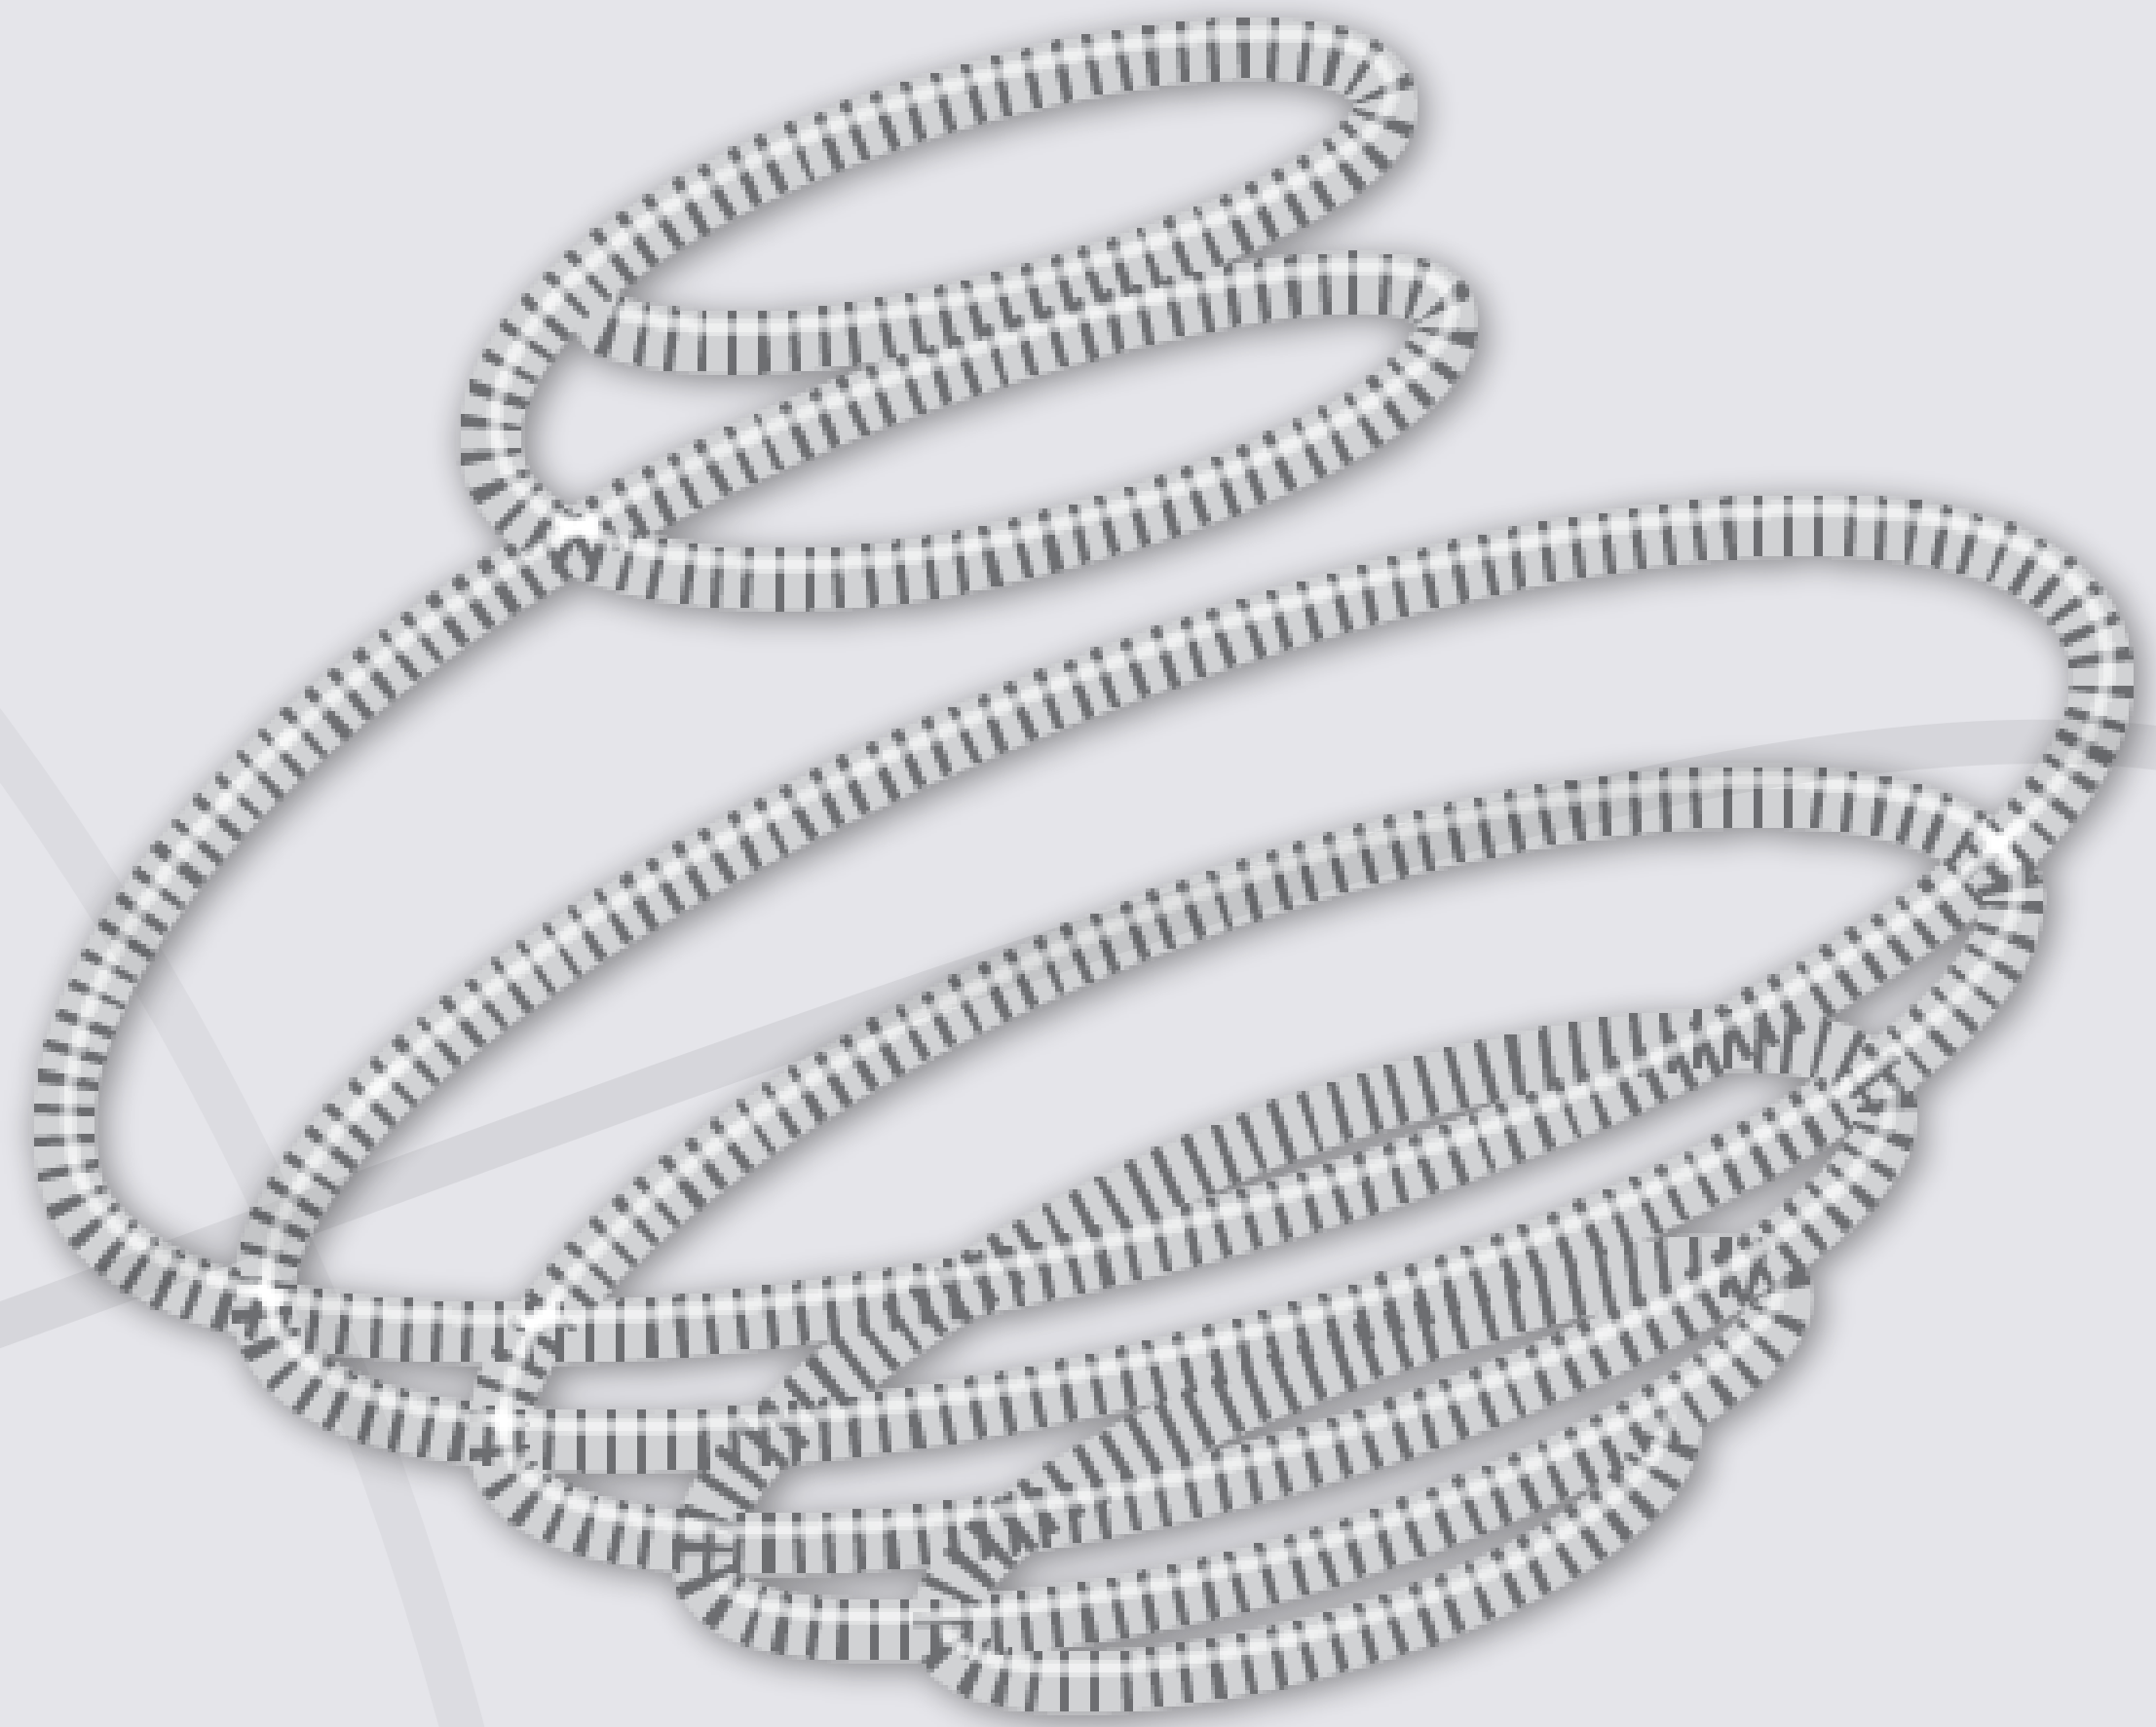

Adaptive solutions

Stable results

About
endostrean.
who we are. what we do.

Endostream develops aneurysm embolization devices, achieving superior occlusion by utilizing self-conforming scaffolds that adapt to an aneurysm's unique shape and provide maximal neck metal coverage

Features

High Visibility

Adaptive Structure

Nautilus™

The Nautilus is a self-conforming, a-traumatic, low-profile intrasaccular neck-cover enhancing coil stability and a maximizing neck coverage, to optimize intrasaccular thrombosis and enable long lasting biological neck remodeling

play now

“It is with great pleasure that I endorse PearlCom Strategy and Design firm for their exceptional work in creating the brand identity for Endostream.

Their outstanding creativity, attentiveness to detail, and ability to grasp the essence of Endostream have been instrumental in positioning us as a leading solution for brain aneurysms.
